

Philippine Geothermal Production Company, Inc. (Philippine Geothermal) is a Filipino corporation operating the Tiwi steam fields in the province of Albay and the Mak-Ban steam fields in the provinces of Batangas and Laguna. It is owned by Allfirst Equity Holdings, Inc. (AEHI), directly and through its wholly owned subsidiaries.

Tiwi and Mak-Ban are the result of a successful partnership between Philippine Geothermal's predecessor and the National Power Corporation that began in 1971, when a 2.5 kW government experiment was transformed into the first commercial geothermal power project in Southeast Asia, and led to the birth of the geothermal industry in the Philippines.

Philippine Geothermal continues its legacy of providing a clean, stable, reliable, and renewable source of energy to meet the country's growing power requirements. Its vision is to be the leading geothermal energy company, recognized not only for its world-class performance but also for contributing to the improvement in the lives of the people in the communities where it operates.

Career Opportunity Facilities Engineer

The Role

Successful candidate will work with a multidisciplinary team in managing engineering and construction projects, and support operation of the asset's steam gathering system in order to maximize generation, minimize cost and adhere to the Operational Excellence Management System (OEMS) objectives. He or she will:

- Define the project scope, level expectations, prepare guidelines for execution, and lead project implementation.
- Perform conceptual, preliminary, and detailed engineering design of approved capital and process projects or review third-party project designs.
- Conduct economic and risk assessment of projects, and coordinate with Construction group in project implementation.
- Commission and test completed projects, and, upon turnover, ensure that Operations and Maintenance personnel are trained to use and maintain these facilities.
- Evaluate project results based on design objectives against actual performance.
- Provide inputs in the formulation of operating and business strategies and decisions.
- Conduct technical assessment and recommend/implement proposals to improve equipment integrity, reliability, and availability.
- Support facility operation in trouble-shooting, technical assessments, and other engineering-related functions.
- Recommend new or revise existing Standard Operating Procedures (SOP's) and evaluate and implement new technologies or opportunities to improve operation.
- Ensure compliance with the company's safety requirements, OEMS, government regulations, engineering codes, and industry standards and practices.
- Coach and mentor other engineers.

The Individual

- Licensed Electrical, Mechanical, Chemical, or Instrumentation and Control Engineer
- With 5 years of relevant work experience in either Process or Project Engineering and Project Management preferably in geothermal or power plant industry
- Good understanding of engineering codes, industry standards, and practices
- Proficient in MS Office Applications
- Good interpersonal and communication skills
- With valid driver's license
- Willing to be assigned in Tiwi, Albay
